                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  009
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              rcagardricaacrigecerrragagarrecaarregercrireaeeeacregaarccar soo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         660
                                                                                                                                                      were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).

Isoflavone onethyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The cDNA and proteins can be used to isolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           99

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            856
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Trectricasascrictristrasasscasisarcriristriascascaarssrisasisis 376
coding sequence from Alfalfa. The present invention relates to a method for genetically manipulating the level of biologically active IOMT. The method involves transforming the target plant with a DNA fragment (the present sequence) to form a transgenic plant. IOMT is useful as foodstuff, nutritional supplement, animal feed supplement, nutraceutical and as a pharmaceutical. Transgenic expression of IOMT in lequmes is useful for engineering both phytoalexin levels for improved disease resistance, and health promoting nutraceutical phytochemicals. IOMT is useful for engineering isoflavone 4'-O-methylation, or other organisms.
                                                                                                                                                                                                                                                                                                                           88

Isoflavone O-methyltransferase catalyses the first step in degradation of daldzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The CDNA and proteins can be used to isolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAA29321-25 encode isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. CDNA libraries se4, sr1, srr1c and ss11c were prepared from soybean embryo (9) days after flowering), root, 8-day old root and seed (25 days after flowering).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            for creating

AMA29321-25 encode isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. CDNA libraries se4, sr1, srr1c and ssl1c were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).

Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavoncids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The cDNA and proteins can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21 CATTAAACAATGGCCGTAAAGCAAGTGAGATTTTTCAAGGTCAAGCTCTCTTGTACAAAC 80

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAA29121-25 encode isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. CDA libraries seq, srl, srric and ssllc were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).

Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Plavonoids serve as coligments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and proteins can be used to irradiation in fruits and seeds. The CDNA and proteins can be used to isolate homologies, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             80

old root and seed (25 days after flowering).
Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The CDNA and proteins can be used to isolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                          AAA29321-25 encode isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. cDNA libraries se4, sr1, srrlc and ssl1c were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).
                                                                                                                                                                                                                                                                                                                                                             New polynucleotide encoding flavonoid biosynthetic enzymes for creating transgenic plants and for immunological screening of cDNA libraries
                                                                                                                                                                                                                                                 (DUPO ) DU PONT DE NEMOURS & CO E I.

A vector containing the DNA can be used to transform a microbe for the recombinant preparation of the enzyme. The enzyme can be used to prepare a secondary metabolite of a plant derived from reticuline which is useful as a raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   116
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   176
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    236

The peptide is useful for identifying GM4,6D inhibitors. GM4,6D inhibitors are useful for reducing inflammation in a mammalian subject and for treating or amelicating diseases affected by the level of cellular fucosylation or diseases affected by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               fucosylation of glycoconjugates. These diseases include arthritis, transplant rejection, asthma, sepsis, reperfusion injury, stroke or infection. The GM4,6D peptide or a polynucleotide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antagonists of the activity of the enzyme. The polynucleotide is useful in developing an assay for defects in the enzyme, as well as in gene replacement therapy. Sequences ABX17942-ABX17944 and ABX17947-ABX33716 represent DNA molecules encoding Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

The invention relates to a composition comprising a human GDP-mannose 4,6-dehydratase (GM4,6D) peptide. The peptide is useful for identifying GM4,6D inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ameliorating diseases affected by the level of cellular fucosylation or diseases affected by the fucosylation of glycoconjugates. These diseases include arthritis, transplant rejection, asthma, sepsis, reperfusion injury, stroke or infection. The GM4,6D peptide or a polynucleotide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antagonists of the activity of the enzyme. The polynucleotide is useful in developing an assay for defects in the enzyme, as well as in gene replacement therapy. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a composition comprising a human GDP-mannose 4,6-dehydratase (GM4,6D) peptide. The peptide is useful for identifying GM4,6D inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ameliorating diseases affected by the level of cellular fucosylation or diseases include arthritis, transplant rejection, asthma, sepsis, reperfusion injury, stroke or inflection. The GM4,6D peptide or a polynucleotide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antegonists of the activity of the enzyme. The polynucleotide is useful in developing an assay for defects in the

This DNA sequence encodes a caffeic O-methyltransferase (see AAYO5661)

of maize. A polynucleotide having this sequence can be amplified from a cDNA library prepared from premeiotic to unfuncleate tassel from maize A632 using the primer pair given in AAX2525 and AAX25226. The invention provides methods and compositions relating to altering lighin biosynthesis and/or the lighin composition of plants. Isolated nucleic acids (see AAX25196-156) that code for proteins (see AAY05657-77) involved in lighin biosynthesis are claimed. Also claimed are recombinant expression cassettes, host colls (especially maize or sorghum), and transgenic plants and cells (especially maize or sorghum), and transgenic plants and colls (aspecially maize or sorghum), and transgenic plants and colls in plant plant coll with a recombinant expression cassette comprising a lighin biosynthesis. A claimed method involves transforming a plant cell with a recombinant expression cassette comprising a lighin biosynthesis polynucleotide for a time sufficient to modulate (preferably increase) lignin biosynthesis in the plant. The plant lignins can be used as chemical feedstock. Plant material of increased lignin content can be used as a fuel source, and in the pulp and page; industry. Decreased lignin content and in the pulp and page; industry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2

The invention relates to methods for producing forage legumes or woody plants having altered lignin composition. Methods for transforming forage legumes with a DNA construct comprises alfalfa caffein acid 3-0. methyltransferase (CCOMT) and the construct comprises alfalfa caffein acid 3-0. methyltransferase (CCOMT) and the corresponding promoter, resulting in the down regulation of the corresponding proposesion. The methods are useful for down-regulation of the curresponding homologous OMT genes, gene silencing, reduced OMT activity corresponding homologous OMT genes, gene silencing, reduced OMT activity levels, reduced lignin content, and modified lignin composition in transgenic plants, and increased digestibility of transgenic plant materials in ruminant animals. The expression of CCOMT transgene produces the angle lignin to guaiacyl lignin ratio in the transformed plant and greatly improved forage in vivo digestibility, and for making lignins with altered dimer bonding patterns. Transforming forage legumes in the transformed plants having modified lignin content and commonities to the content and commonities of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    content and composition for direct comparison of the effects of lignin content and/or composition of forage digestibility. The methods are also useful for producing plants that are modified to alter lignins and improve pulping characteristics for the paper industry. The present CDNA
                                                                                                                                                                                                                                                                                 Alfalfa, caffeoyl CoA 3-0-methyltransferase, CCOMT, lignin, woody plant, forage legume, transgenic plant, paper industry, ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     improve pulping characteristics for the paper industry. The present cDNA sequence encodes alfalfa caffeoyl CoA 3-0-methyltransferase (CCOMT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transforming forage legumes for modifying lignin composition and increasing in vivo digestibility comprises transforming plants with lignin biosynthetic enzyme genes under lignification-associated tissue specific promoter -
